

**Description:** This histogram represents the duration distribution of Netflix films. The data shows a relatively wide range of durations, with peaks around the 40-minute and 90-minute marks.

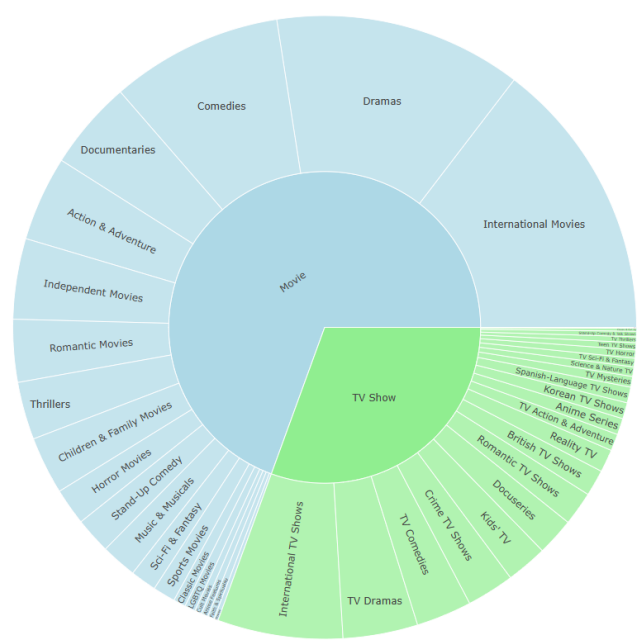

The diagram was upgraded by adding a smooth density curve (KDE) to the histogram, which provides a clearer view of the distribution's shape.

This enhancement improves interpretability by highlighting trends and central tendencies more effectively than the raw bars alone.

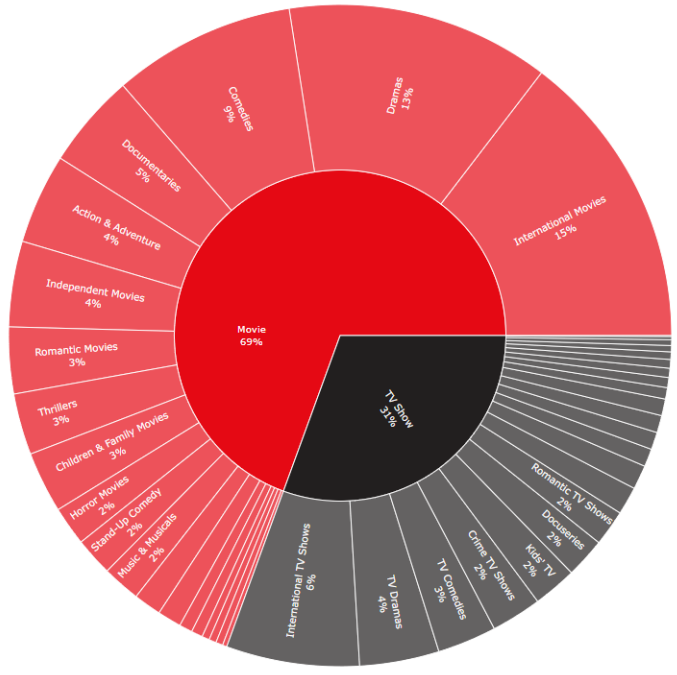

**Description:**

The chart shows a hierarchical view of Netflix content divided into two main categories: *Movies* and *TV Shows*, with their corresponding sub-genres.

The diagram was upgraded by adding percentage labels and a clear title to improve the readability and interpretability of the data. Additionally, a bold color scheme enhances visual contrast, making distinctions between categories much more apparent.

Répartition des contenus Netflix par type et genre

We also added a zoom to view the small details and matched the colors to Netflix theme.
